Paula,

Under Subpart J of the National Contingency Plan (40 CFR Part 300), the responsible party will determine if a particular technology is feasible for use during an oil spill emergency response. The Federal On-Scene Coordinator may authorize the use of a product that is not already pre-authorized by seeking concurrence of the Regional Response Team.

I have spoken to the Unified Command Environmental Unit here at the spill, and any company interested in Exxon using their product should contact the Exxon Claims hotline. They will walk you through the process of getting on the Exxon Vendor list to be considered for use for the spill.

The claims number is 1-800-876-9291

Thanks
Steve Mason
EPA Region 6

Subject: Patented Green Oil Solutions

Good morning Mr. Gray,

The reason for my contacting you is because of the pipeline spill in Arkansas. We have on hand a large quantity of our Oil Solutions Products which could be a tremendous help in this situation. Please take a look at our website to see for yourself that our products would give Arkansas relief from this disaster.

We have a patented green product called Oil Solutions. Oil Solutions is an amazing product that can clean up oil, gas, and any carbon based fuel on contact, by encapsulating the spill, and turning it into a solid, that can legally be thrown in the garbage and will not leach. It is EPA listed and Federally approved. It can also take away the smell and stain on contact.

We currently have NY City Terminal, located in New Jersey as one of clients, as well as several **Environmental, Power Washing Companies. Manufacturing and Elevator Maintenance Companies and Procter & Gamble.** We were hoping your company would also be interested in using our products.

Our website is www.cleaningupoil.com if you would like to view our videos of Oil Solution in action.

Oil Solutions comes in a powder and a liquid form.

The powder is used on pooling fuel or fuel on water. Just spread it on, it turns the fuel into a solid that can legally be thrown in the trash.

The liquid is used to remove the stain and odor even if it is in wood, it also encapsulates the spill when it has already penetrated.

It is also landfill safe.

Once Oil Solutions comes in contact with carbon based fuel it immediately makes the fuel non-flammable and non-hazardous, which would be a great tool for your company to be using. Our products will do the job with less product that absorbs more for less money than our leading competitors.

We are looking forward to doing business with your company in the near future.

We would love to come and do a free live, no obligation demonstration for your company.

Thank you and have a great day.
